Key-Box **L series 9500 SC-EC**

For Storing/Securing All Businesses / Organizations Facilities/Asset Keys

The Key-Box software provides a full audit trail and real time reporting, detailing who has used each set of keys and when. As a result, staff become more accountable and our customers have found that keys are returned at the end of shifts. This leads to reduce security requirements, with less loss, damage and liability

Benefits

- Manage, control and report on the use of facility and asset keys
- Identify when keys are taken and returned, and by whom
- Restrict access to specific site and facility keys for staff and contractors
- Improve shift start-ups by ensuring important keys are always in place and ready to use
- Completely remove the need for manual key issue
- Reduce losses and damage by making users fully accountable
- Fully scalable to accommodate any number of keys
- 24/7 Audit trails of all key activities.

Do you know where your valuable facilities keys are? With Key-Box automated key systems you'll always know where your keys are 24/7!

Affordable Secure Solutions for All Business

Full Audit Control

KeyWin-Pro Software

Key-Box Key Management Systems are the affordable intelligent choice!

Key-Box Automated Key Management Systems
Non-Locking and Locking Key Fob Comparison

Choosing the right key system for your key management requirements The *Key-Box* offers two styles of key systems The 1st version is the budget series with Non-Locking individual key fobs and The 2nd version is the high security series with secured intelligent individual Locking key fobs.

Locking Key Key Fob

Non-Locking Key Fob

A brief description on how both systems work

The way the **Key-Box** automated key systems with individual **High Security "Secure-Lock" Locking Key Fobs.** Each individual user is issued a preselected PIN which is entered on the cabinet keypad. Once the PIN is entered and authorized by the system the door automatically opens and the user will have access to only those keys authorized to them. The remainder of the keys stay securely locked in the cabinet. After a key is removed, the system records when it was taken, when it is returned and the user's information etc. If a curfew or time limit is set in the system, and a key is not returned on time, the system will automatically generate an email to management notifying them of the past due key/keys and user name etc. The system therefore gives you a complete audit trail 24/7 of the usage on your valuable facilities, assets and vehicle keys while encouraging user accountability.

Our *Key-Box* 100% solid metal intelligent Locking key fobs is the intelligent choice for securing keys/assets

The way the **Key-Box** key systems with individual **Non-Locking Key Fobs** works is each individual user would be issued a preselected PIN number. The authorized user will then enter his/her PIN on the key pad located on the key cabinet, the cabinet door will automatically open and the authorized user would have access to the keys they require. The system will record when the keys were taken and when they are returned. If the keys are not returned within the curfew the system will automatically generate an email and send it to management to alert them that a key or keys have not been returned within the curfew, and who the user is etc. The system gives you a full audit trail 24/7 of who took the keys, when the they were returned, plus the system will make your staff more accountable for your valuable vehicle/asset/facilities keys.

Key-Box 100% solid metal intelligent Non-Locking Key fobs are suitable for less secure applications etc.

The **Key-Box L series 9500 SC-EC** series key systems are very easy to set up by your in house IT personnel, we will provide unlimited free technical support to your staff if required while setting up the systems. In 95% of installations our clients across North America have set up their own systems without any difficulty. KeyWin-Pro

Key Management Software

Smart and Simple

Administrative tool for management of your valuable keys

KeyWin-Pro **Standard Light software license is included free of charge with all *Key-Box* key management systems with no annual fees!**

Key-Box Key Systems are Powered By

KeyWin-PRO

Standard Key Management Software with Total Accountability

KeyWin 6-PRO
Gives you total control. Easy to use, Easy to Manage

Flexible KeyWin 6 makes it easy to manage everything from around 10 keys up to several thousand keys. You can use one key cabinet or 100 key cabinets in the same key management system and at different locations. The key management system can be managed by a single administrator, or shared with other administrators.

Users, groups and keys are simple and quick to register. You determine which users and groups get which keys by connecting them in the key management system. Every use of the key is registered, and a simple search lets you find out who has had what key and when.

KeyWin-PRO Standard Software
Countdown Function Feature

This function determines how many times the user can enter the key cabinet, value box or compartment

KeyWin-PRO Standard Software

Provides total Control of your keys - Even from the other

side of the world

KeyWin Pro keeps your keys in order. You can easily connect via TCP/IP and communicate via the network connection so you can simply administer and program your Key control series key cabinet, whether you are in the same office block or anywhere in the world.

You log into the key cabinet as a user using your personal code. Each key has a key peg with a unique identity, which is placed in a strip that in turn communicates with the KeyWin Pro key management program, where each separate event is registered. The key strips then indicate which keys you have access to or, if a key has already been removed, you receive informa-tion on the display about who is using the key. You can also search for his-

toric information about keys in KeyWin5 program.

### KeyWin-PRO Loaded with Features

Easy to Use
The administrator determines the members of staff who have access to a specific key by entering which user can log into the key cabinet or value box with his or her personal code.

Create User Groups
You can simplify administration when there are many users with different access rights by creating groups. It is possible to create both key groups and user groups

Name Keys
You give each key a name of your choice, or a key ID, to create order in your key management.
KeyWin-PRO

Intelligent Search Functions
The search function finds everything in KeyWin, since it searches on files, email, contacts, groups, alarms, etc. - as fast as you type.

Visual Cabinet View
Gives you the option to view the key cabinet's status and edit the keys in the key cabinet.

Time Channel
Limit a group's use by setting a time channel. The group's keys are available when the time channel is active.

Event Log
All events are registered in the log, both from key cabinets and from KeyWin5. You choose what will be shown. The intelligent search function, with select options and timeframe, simplifies obtaining the right information and producing reports

Backup
You can easily create backups for the entire key management program. They are automatically named with the date and time; it is just as simple to restore the backup as it is to create it

Alarm Indication
When you receive an alarm, the alarm is clearly marked by a red event in the event log and you can easily see who or what has triggered the alarm

Export
You can always make a backup of the event log. Either via a CSV file which you can import to Excel or direct to a PDF file

Communication Settings
You have a number of possible communication settings that can be synchronized with your network.

Alarm Settings
You can choose between many different alarms for your key cabinet. For example, door alarm, key alarm, break-in alarm, etc.

KeyWin-PRO Standard Software and KEYBOX Security Key Cabinets

The Key-Box series smart range of electronic key cabinets with electronic key identification for monitoring and control of each individual key. The Key-Box administration is performed using the PC program keyWin 6 Pro, where all events are logged and saved
