Affordable Key Management Systems for Housing/Commercial Facilities

Key-Box Intelligent Key/Asset Management for all Types of Businesses and Organizations

9400 SC Series

***For Storing/Securing All
Businesses / Organizations
Facility/Asset Keys***

Key-Box

9400 SC Series

The Key-Box software provides a full audit trail and real time reporting, detailing who has used each set of keys and when. As a result, staff become more accountable and our customers have found that keys are returned at the end of shifts. This leads to reduce security requirements, with less loss, damage and liability

Benefits

- Manage, control and report on the use of facility and asset keys
- Identify when keys are taken and returned, and by whom
- Restrict access to specific site and facility keys for staff and contractors
- Improve shift start-ups by ensuring important keys are always in place and ready to use
- Completely remove the need for manual key issue
- Reduce losses and damage by making users fully accountable
- Fully scalable to accommodate any number of keys
- 24/7 Audit trails of all key activities.

Do you know where your valuable facilities keys are? With Key-Box automated key systems you'll always know where your keys are 24/7!

North America's Most Affordable Key Management Systems

- Easy to follow set up instructions

The user simply enters his/her unique assigned PIN to gain access to the key cabinet. Optional card access readers are available to match your existing access cards. Also available is our high quality Bio-metric fingerprint access readers

All keys and keysets are individually locked by the Key-Box system green LED's indicate those keys to which the user has access to all other keys will stay locked and will continue to remain locked in place (with locking key fob option) or stored in place with the non locking key fob version

Keys are easily returned to the key cabinet the user enters his/her PIN on the keypad the door will automatically open the key/keys are simply inserted back in their slots and are locked in place (with locking key fob option) or stored in place with the non locking key fob version

Key-Box standard secure key rings. The secure one time tamper proof security ring is cost effective and simple to apply without the need for special tools.

Key-Box intelligent robust solid metal key fobs are attached to a robust security tamper proof ring individual keys or keysets are assigned a specific receptor within the key cabinet and stored in place until released by an authorized user

Full Audit Control

KeyWin 6 Pro Software

Key-Box Key Management Systems are the affordable intelligent choice!

Key-Box Automated Key Management Systems **Non-Locking and Locking Key Fob Comparison**

Choosing the right key system for your key management requirements. The **Key-Box** offers two styles of key systems. The **1st** version is the budget series with **Non-Locking** individual key fobs and The **2nd** version is the high security series with secured intelligent individual **Locking** key fobs.

Locking Key Key Fob

Non-Locking Key Fob

A brief description on how both systems work

The way the **Key-Box** automated key systems with individual **High Security "Secure-Lock" Locking Key Fobs**. Each individual user is issued a preselected PIN which is entered on the cabinet keypad. Once the PIN is entered and authorized by the system the door automatically opens and the user will have access to only those keys authorized to them. The remainder of the keys stay securely locked in the cabinet. After a key is removed, the system records when it was taken, when it is returned and the user's information etc. If a curfew or time limit is set in the system, and a key is not returned on time, the system will automatically generate an email to management notifying them of the past due key/keys and user name etc. The system therefore gives you a complete audit trail 24/7 of the usage on your valuable facilities, assets and vehicle keys while encouraging user accountability.

Our Key-Box 100% solid metal intelligent Locking key fobs is the intelligent choice for securing keys/assets

The way the **Key-Box** key systems with individual **Non-Locking Key Fobs** works is each individual user would be issued a preselected PIN number. The authorized user will then enter his/her PIN on the key pad located on the key cabinet, the cabinet door will automatically open and the authorized user would have access to the keys they require. The system will record when the keys were taken and when they are returned. If the keys are not returned within the curfew the system will automatically generate an email and send it to management to alert them that a key or keys have not been returned within the curfew, and who the user is etc. The system gives you a full audit trail 24/7 of who took the keys, when they were returned, plus the system will make your staff more accountable for your valuable vehicle/asset/facilities keys.

Key-Box 100% solid metal intelligent Non-Locking Key fobs are suitable for less secure applications etc.

The **Key-Box 9400 SC - 9500 SC** series key systems are very easy to set up by your in house IT personnel, we will provide unlimited free technical support to your staff if required while setting up the systems. In 95% of installations our clients across North America have set up their own systems without any difficulty. The systems come complete with software, set up instructions and a 3 year limited warranty

Key-Box Key Management Systems are the affordable intelligent choice!

Key-Box Key Management Systems

Technical Specifications

9400 SC Series

Modular Design Features

Designed to accommodate **between 14 and 42 keys (or key sets)**, the innovative **9400 SC Series** design allows for starting small and later expanding by adding multiples of 14 key positions (called expansion key strips) as required.

Expansion Key Strips are defined as locking or non-locking. Locking receptor strips **lock the key fobs** in place restricting access to authorized personnel down to the individual key. Non-locking expansion strips provide a solution for organizations requiring less security but still an audit of key usage. **LED lighting** indicate which keys can be taken, which keys are restricted and assist the user when returning the key to the correct location

14 key slot locking expansion key strip with LED indicating lights

The cabinets can be supplied with a Standard solid Metal door or optional clear polycarbonate door. The control panel consists of the user interface which includes the screen, keypad and access card or biometric reader.

PC Software Administration

The 9400 SC Series is administered from the user friendly **KeyWin 6 Pro software** supporting a **Microsoft Access** or **SQL database**.

The 9400 SC Series can communicate with the KeyWin 6-Pro software using a range of different options including **Ethernet, GPRS, RS485, RS232** and **modem**. **Multiple systems can be networked together** over a local or wide area network to provide accountability for a limitless number of keys administrated from multiple PC workstations running the KeyWin 6-Pro software.

User Identification

The 9400 SC Series can support any type of access control device required to identify a user to the key system. Supported devices include **RFID proximity readers** from all leading access control manufacturers, **magstripe**, and **barcode**. **Biometric is not available for 9400SC**

Optional polycarbonate clear door with metal frame at extra cost

Administrative tool for
management of your
valuable keys

KeyWin 6-Pro Standard Light software license is
included free of charge with all **Key-Box** key
management systems with no annual fees!

Key-Box Key Systems are Powered By

KeyWin 6-PRO

Standard Key Management Software with Total Accountability

KeyWin 6-PRO Standard Software Gives you total control. Easy to use, Easy to Manage

Flexible KeyWin 6 makes it easy to manage everything from around 10 keys up to several thousand keys. You can use one key cabinet or 100 key cabinets in the same key management system and at different locations. The key management system can be managed by a single administrator, or shared with other administrators.

Users, groups and keys are simple and quick to register. You determine which users and groups get which keys by connecting them in the key management system. Every use of the key is registered, and a simple search lets you find out who has had what key and when.

KeyWin 6-PRO Standard Software Countdown Function Feature

This function determines how many times the user can enter the key cabinet, value box or compartment

KeyWin 6-PRO Standard Software Provides total Control of your keys - Even from the other side of the world

KeyWin 6 keeps your keys in order. You can easily connect via TCP/IP and communicate via the network connection so you can simply administer and program your Key control series key cabinet, whether you are in the same office block or anywhere in the world.

You log into the key cabinet as a user using your personal code. Each key has a key peg with a unique identity, which is placed in a strip that in turn communicates with the KeyWin 6 key management program, where each separate event is registered. The key strips then indicate which keys you have access to or, if a key has already been removed, you receive information on the display about who is using the key. You can also search for historic information about keys in KeyWin5 program.

KeyWin 6-PRO Loaded with Features

Easy to Use

The administrator determines the members of staff who have access to a specific key by entering which user can log into the key cabinet or value box with his or her personal code.

Create User Groups

You can simplify administration when there are many users with different access rights by creating groups. It is possible to create both key groups and user groups

Name Keys

You give each key a name of your choice, or a key ID, to create order in your key management.

Intelligent Search Functions The search function finds everything in KeyWin, since it searches on files, email, contacts, groups, alarms, etc. - as fast as you type.

Visual Cabinet View Gives you the option to view the key cabinet's status and edit the keys in the key cabinet.

Time Channel Limit a group's use by setting a time channel. The group's keys are available when the time channel is active.

Event Log All events are registered in the log, both from key cabinets and from KeyWin5. You choose what will be shown. The intelligent search function, with select options and timeframe, simplifies obtaining the right information and producing reports

Backup You can easily create backups for the entire key management program. They are automatically named with the date and time; it is just as simple to restore the backup as it is to create it

Alarm Indication When you receive an alarm, the alarm is clearly marked by a red event in the event log and you can easily see who or what has triggered the alarm

Export You can always make a backup of the event log. Either via a CSV file which you can import to Excel or direct to a PDF file

Communication Settings You have a number of possible communication settings that can be synchronized with your network.

Alarm Settings You can choose between many different alarms for your key cabinet. For example, door alarm, key alarm, break-in alarm, etc.

KeyWin 6-PRO and KEYBOX Security Key Cabinets

The Key-Box series smart range of electronic key cabinets with electronic key identification for monitoring and control of each individual key. The Key-Box administration is performed using the PC program keyWin 6 Pro, where all events are logged and saved
